GREATER CHENNAI CORPORATION (GCC) SOLID WASTE MANAGEMENT RULES & DATA

=====

SECTION 1: THE MANDATORY 4-STREAM SOURCE SEGREGATION MODEL

All residential households, commercial spaces, and bulk generators within the Greater Chennai Corporation (GCC) footprint must structurally separate daily waste at its immediate source into four distinct categories before collection:

1. **WET STREAM:** Kitchen organics, food waste, and biodegradable matter. Routed to micro-composting centers (MCC) and regional bio-methanation biogas facilities.
2. **DRY STREAM:** Recyclable plastics, clean paper, cardboards, glass, and non-hazardous metals. Routed to localized Materials Recovery Facilities (MRF).
3. **SANITARY STREAM:** Diapers, sanitary napkins, and personal hygiene waste. Handled via specialized secure disposal incinerator paths.
4. **SPECIAL CARE STREAM (E-WASTE & HAZARDOUS):** Old smartphones, chargers, laptops, motherboards, batteries, bulbs, expired medicines, and chemicals. This stream cannot be mixed with municipal garbage and must route exclusively to authorized recyclers.

SECTION 2: CHENNAI WASTE INFRASTRUCTURE LOG & LANDFILL VOLUMES

Chennai generates approximately 6,150 to 6,300 Metric Tonnes of municipal solid waste every single day (TPD). The logistics grid routes this payload across two massive dump sites and modern processing units:

1. SITE NAME: KODUNGAIYUR LANDFILL (NORTH CHENNAI)

- Extent: ~269 Acres
- Catchment Profile: Handles Zone 1 (Tiruvottiyur) to Zone 8 (Anna Nagar).
- Daily Processing: Accepts roughly 2,200 - 2,500 Metric Tonnes per day. Currently undergoing legacy waste biomining alongside a planned 2,100 TPD Waste-to-Energy (WTE) plant facility.

2. SITE NAME: PERUNGUDI LANDFILL (SOUTH CHENNAI)

- Extent: ~200 Acres (Adjacent to Pallikaranai marshland boundaries)
- Catchment Profile: Handles Zone 9 (Teynampet) to Zone 15 (Sholinganallur).
- Daily Processing: Accepts roughly 2,000 - 2,300 Metric Tonnes per day. Undergoing continuous mechanical biomining processing to remediate environmental marshland run-offs.

3. URBAN TRANSIT DEPOTS (TRANSFER STATIONS):

- ZONE 8 HUB: Otteri Transfer Yard (Near Brick Kiln Road) -> Feeds Kodungaiyur.
- ZONE 10 HUB: Valluvar Kottam High Road Transfer Yard -> Feeds Perungudi.
- ZONE 13 HUB: Besant Nagar Depot (Urbaser Sumeet Operations) -> Feeds Perungudi.

SECTION 3: TAMIL NADU POLLUTION CONTROL BOARD (TNPCB) REGISTERED ASSIGNMENTS

When citizens flag high-risk or bulk electronic equipment, it must be dispatched to authorized treatment infrastructure plants in the Chennai cluster:

1. FACILITY: M/s AK Enterprises

- Location: No: 12, Chakarapani Street, Velachery, Chennai – 600032.
- Profile: Registered E-Waste Dismantler. Capacity: 170 Tons/Annum.
- Contact: +91-9176664862 | Email: akenter06@gmail.com

2. FACILITY: M/s Abishek Enterprises

- Location: SF No. 2G, North Phase, SIDCO Industrial Estate, Ambattur, Chennai – 600098.
- Profile: Massive E-Waste Processing Plant. Capacity: 6,000 Tons/Annum.
- Contact: +91-9884057878 | Email: enterprisesabishek@yahoo.com

3. FACILITY: M/s AER Worldwide India Pvt Ltd

- Location: SF No. 774, Elandandheri, Sadayankuppam Village, Manali New Town, Chennai – 600103.

- Profile: Industrial Electronics Hardware Recycler. Capacity: 12,000 Tons/Annum.

- Contact: +91-9940105999 | Email: jkumar@aerworldwide.com

4. FACILITY: M/s Arockia Enterprises

- Location: No. 4/1E, Seevaram Village, Sholinganallur Taluk, OMR, Chennai – 600097.

- Profile: Active Collection and Component Dismantling. Capacity: 216 Tons/Annum.

- Contact: +91-9551044431

SECTION 4: ECO-DISPOSAL MATRIX AND CRITICAL DANGER MATRIX

- LITHIUM-ION BATTERIES (Laptops/Smartphones): Danger Profile: HIGH (Fire explosion hazard if compressed in garbage trucks). Handling Protocol: Seal contacts with non-conductive tape. Discard safely into the Special Care Stream or route to Abishek Enterprises (Ambattur).

- TUBE LIGHTS & BULBS: Danger Profile: MEDIUM (Mercury gas inhalation hazard). Handling Protocol: Maintain casing structure intact. Hand over carefully at local Zonal Materials Recovery Facilities (MRF).

- COMPUTERS & PC TOWERS: Danger Profile: LOW (Contains hazardous Lead/Beryllium but highly stable). Handling Protocol: Safe for collection; store in bulk dry environment and schedule industrial haulage with AER Worldwide (Manali).
